

ExpresSew™ II

SURGICAL TECHNIQUE

Intuition redefined.
Enhanced ergonomics
& functionality provide
unparalleled simplicity,
flexibility and reliability
in suture management

INTUITIVE · SIMPLE · FLEXIBLE · RELIABLE

ExpresSew™ II FLEXIBLE SUTURE PASSER

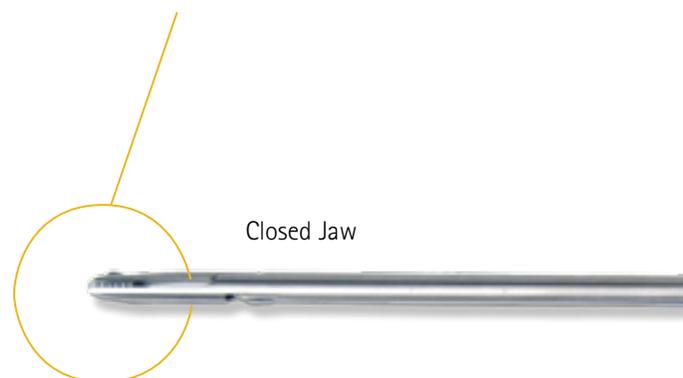

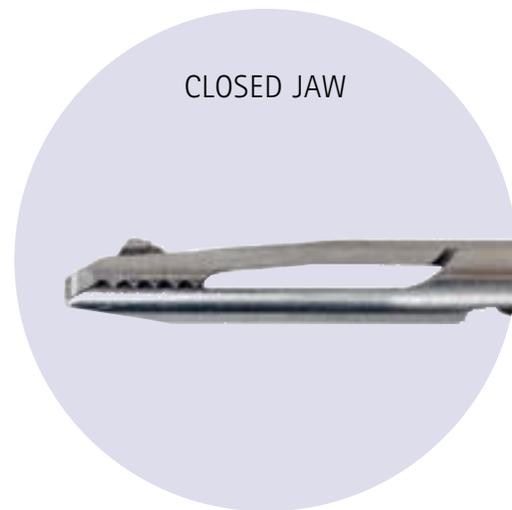

Jaw Ratchet/Ratchet Release

mechanism provides "single finger" operation, control and simplicity

Needle Auto Retraction feature provides simplified "single step" deployment and retraction

Simplified **Needle and Suture loading** saves time, increasing Operating room efficiency

Polymer coated needle increases reliability by reducing needle deployment and retraction forces

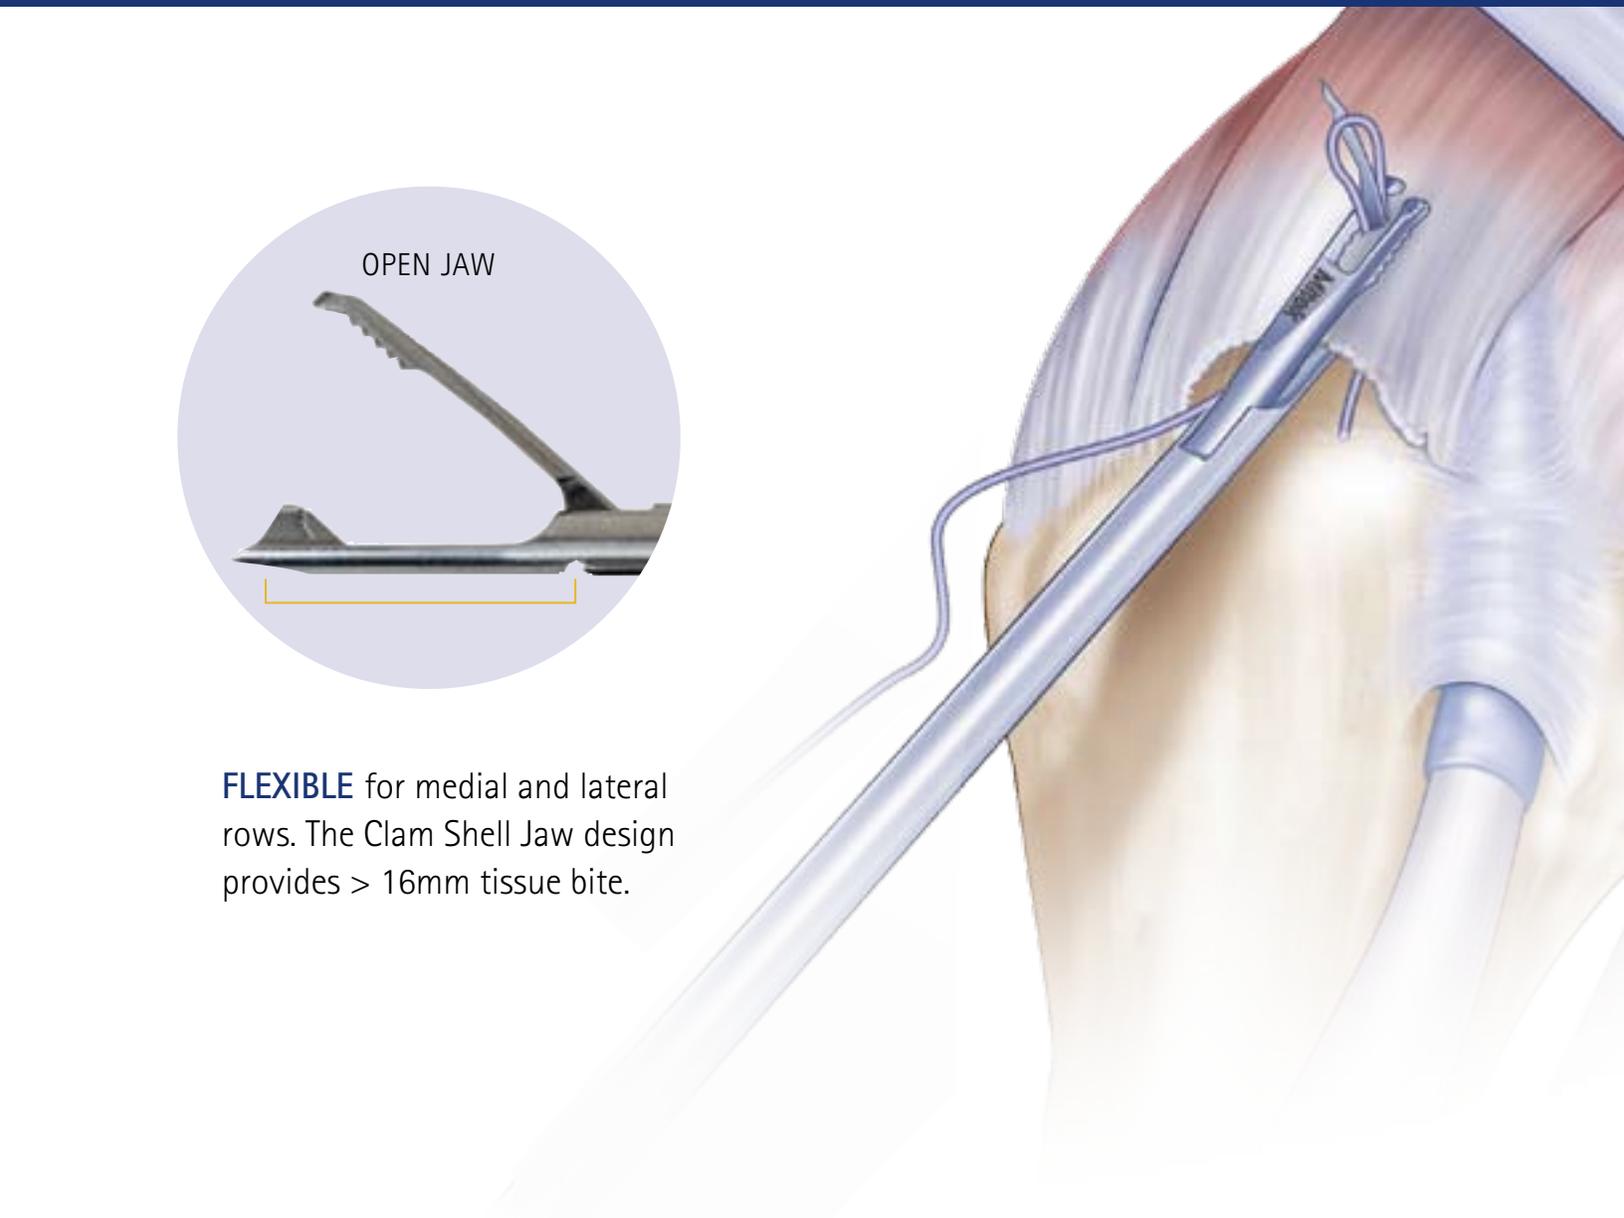

Intuitive. Simple. Flexible. Reliable.

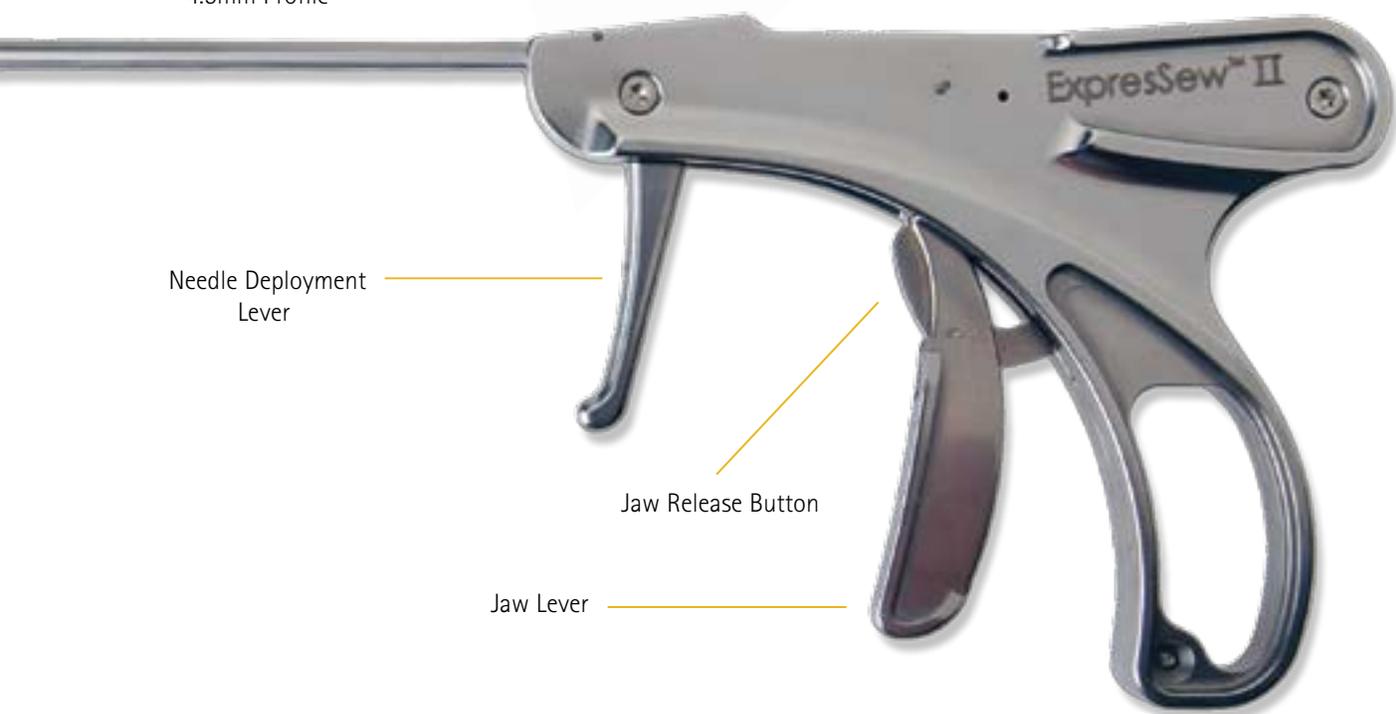

OPEN JAW

FLEXIBLE for medial and lateral rows. The Clam Shell Jaw design provides > 16mm tissue bite.

4.5mm Profile

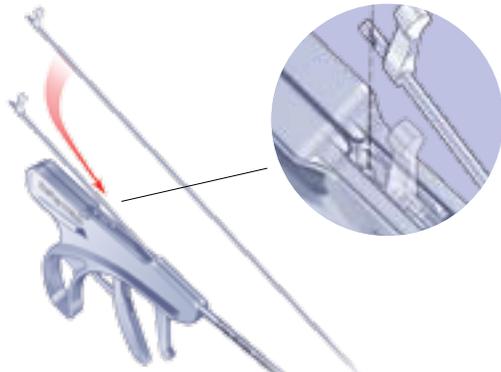

Needle Deployment Lever

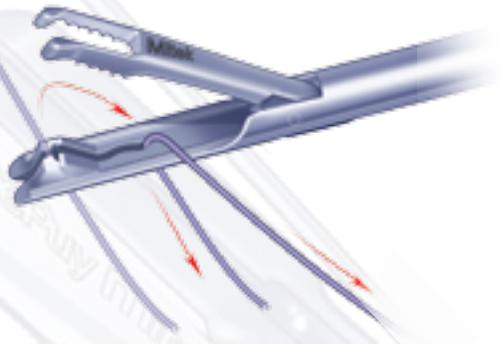

Jaw Release Button

Jaw Lever

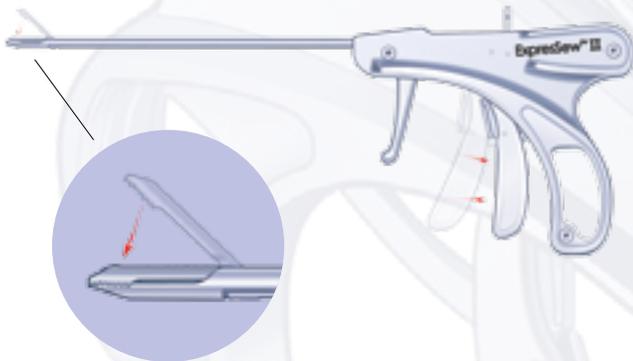

SURGICAL TECHNIQUE

1. Load the needle by grasping the needle flag and sliding the needle through the back end of the device. Align the notch on the needle with the nub in the needle rack and drop the needle into place. Test fire to confirm the needle is properly loaded.

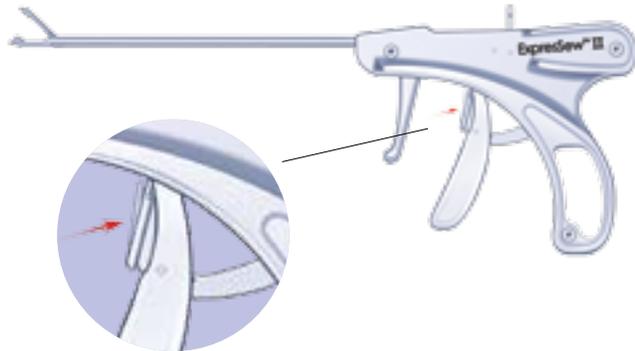

2. Load the suture, making a loop of suture that creates a short 1" tail. Load the short tail down into the front loading slot and slide it to the back end. Insure the suture is securely seated in the most proximal aspect of the suture slot.

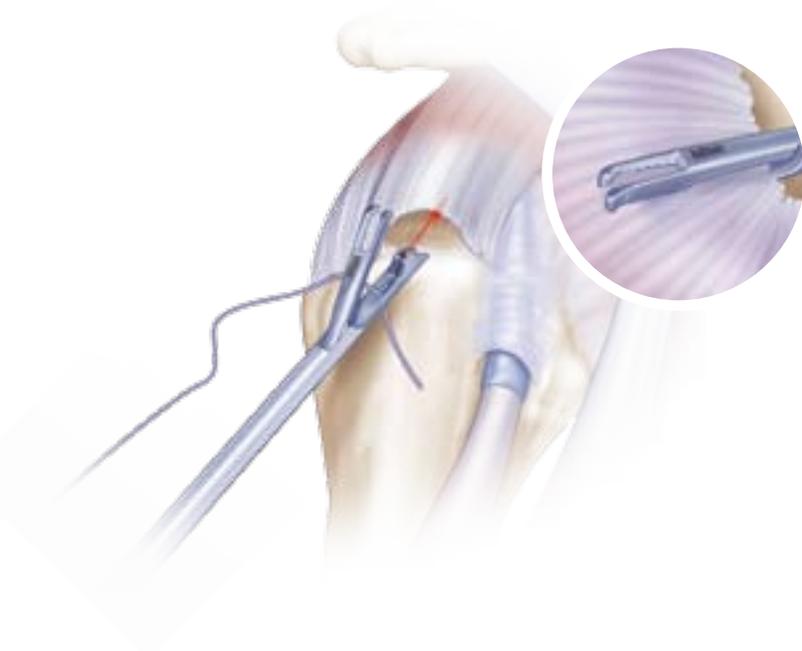

Close the jaw in preparation for use by pulling the jaw lever.

EXPRESSEW II FLEXIBLE SUTURE PASSER

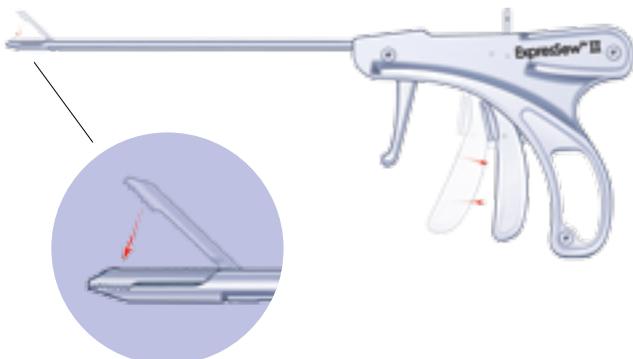

3. Open the jaw by pushing the jaw release button.

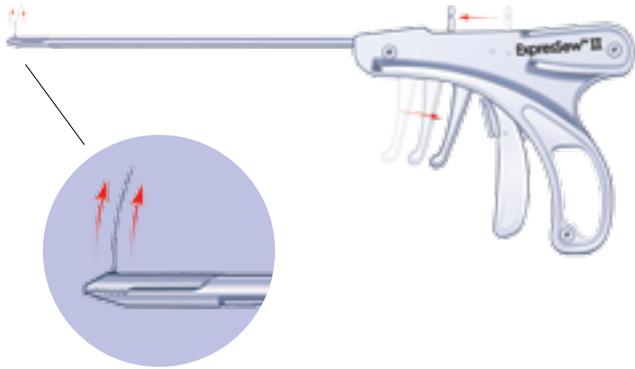

Engage the tissue.

Close the jaw by pulling the jaw lever.

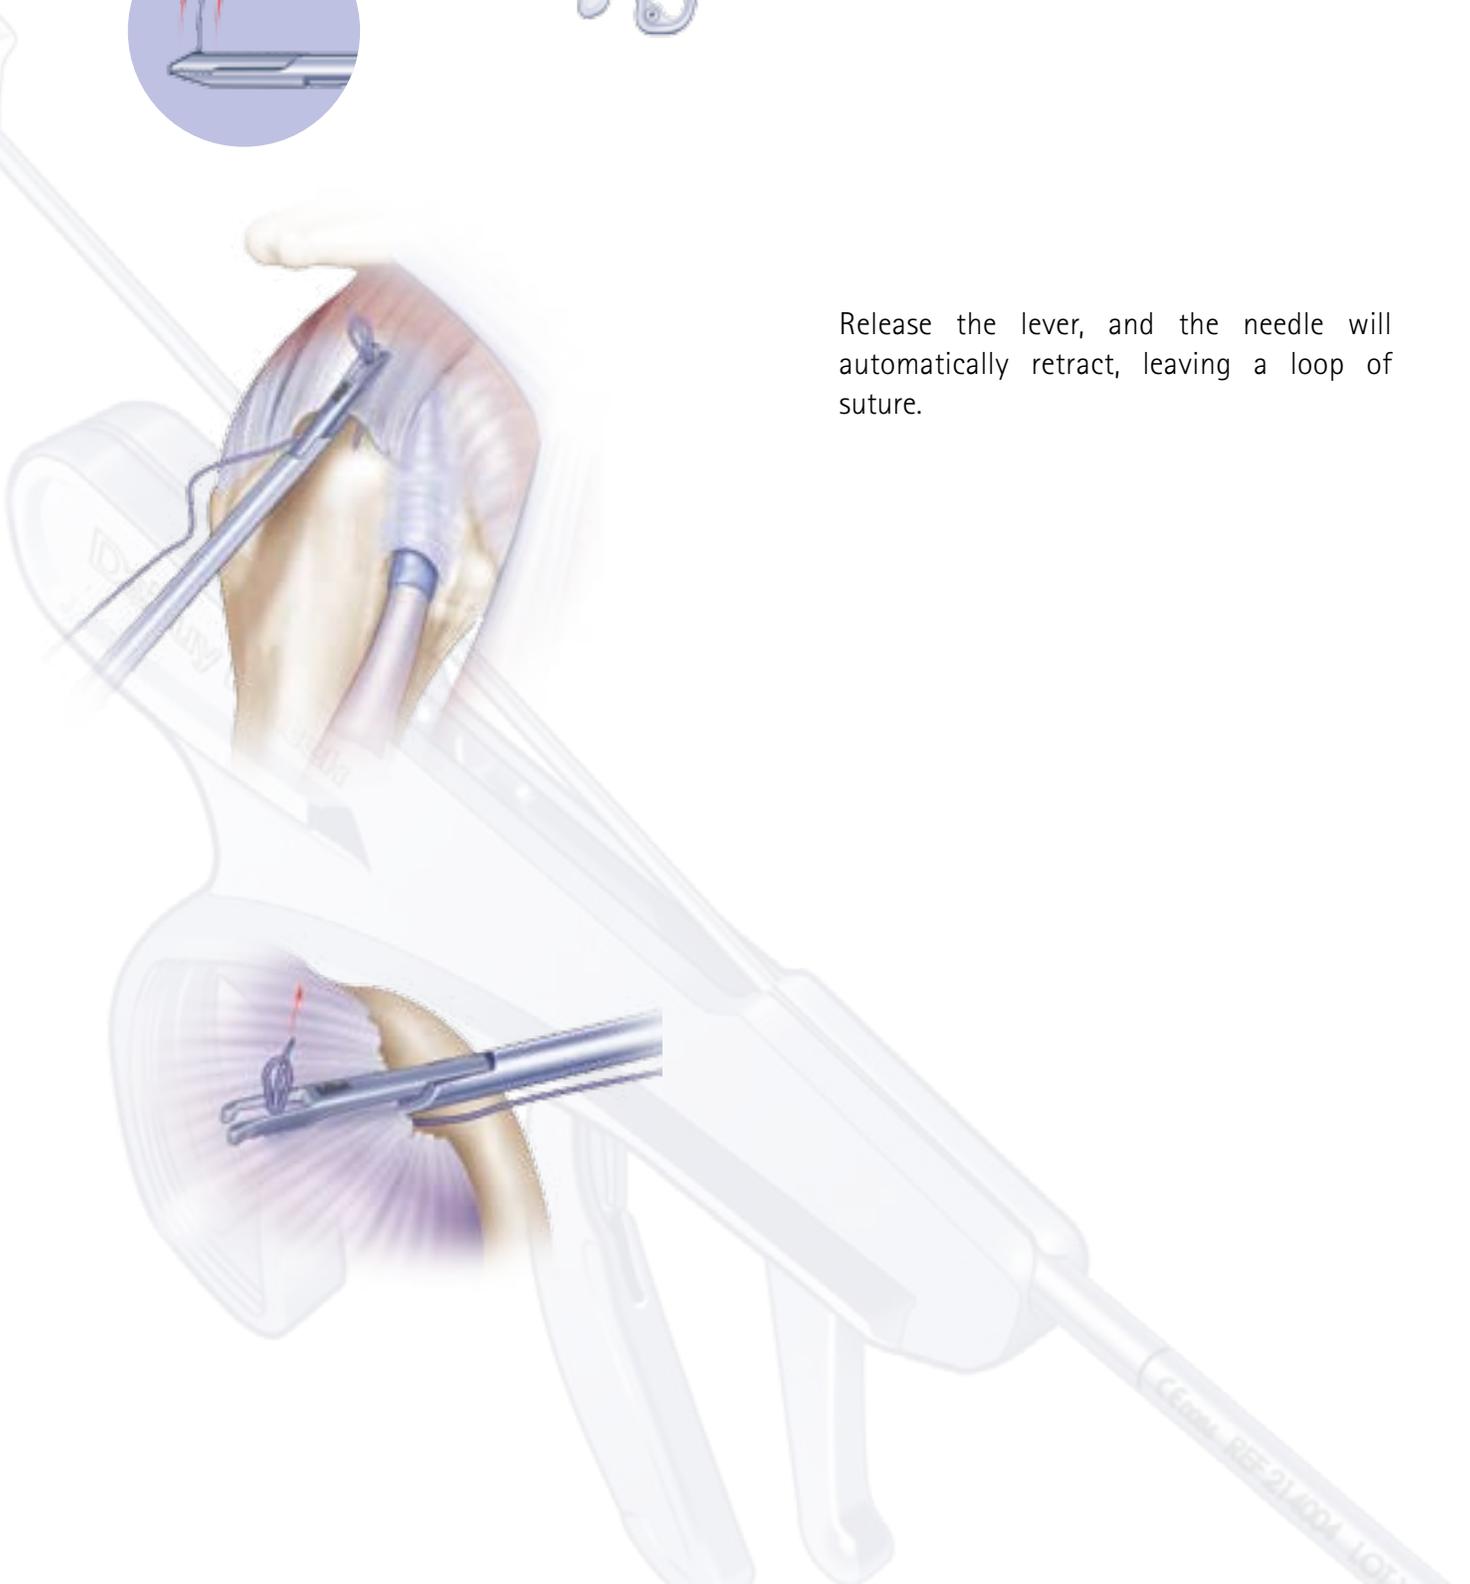

SURGICAL TECHNIQUE

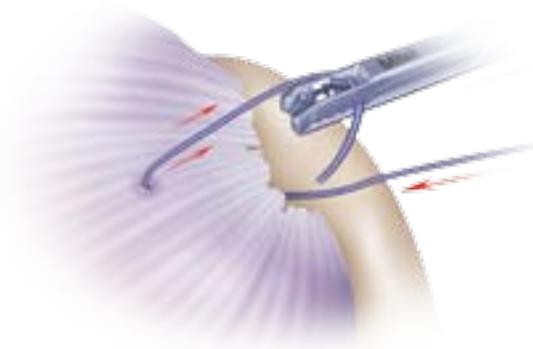

4. Deploy the needle by pulling the needle deployment lever.

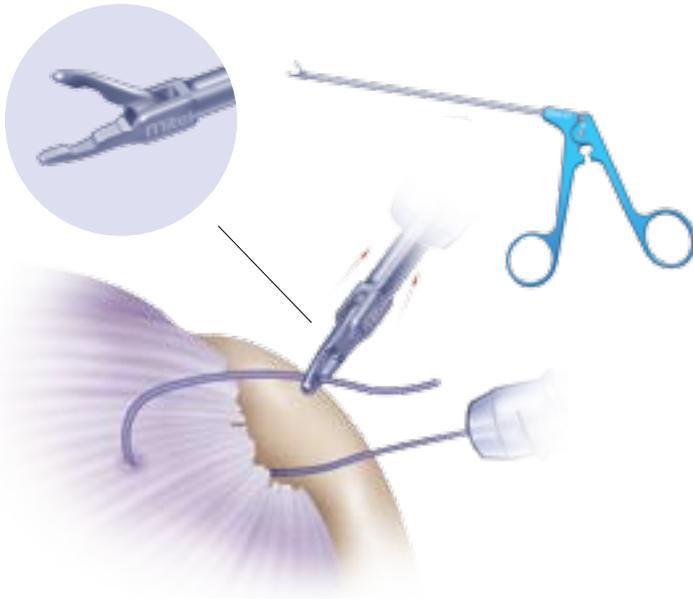

Release the lever, and the needle will automatically retract, leaving a loop of suture.

EXPRESSEW II FLEXIBLE SUTURE PASSER

5. Reach on top of the Rotator Cuff and grasp the suture in the jaws of the EXPRESSEW II.

Alternative technique: Grasp the suture from an accessory portal with the DePuy Mitek Grasper-Grabber.

Intuitive. Simple. Flexible. Reliable.
